

You are our guest

We are a team of professionals passionate about what we do and in the last 4 years we have gathered our technical knowledge, practices in different areas and specific skills to create this solution

What is it?

Berule is an extremely well built automated tool

It trades StableCoins in real time and is designed for investors who treat their assets with respect

StableCoins

These are stable securities that have quotes matched to Real Assets

They can be pegged to precious metals, oil and other commodities, etc

PAXG/USDT Gold & Dollar

Beblue is the world's first robot to hold users funds in one of the two most stable and secure markets in the world

Our 7 Columns

We have developed a solid tool with unique solutions

Our purpose is to offer good results to our users

Advantages and Differentials

1. User Custody
2. Direction Indicators
3. Average Price Operation
4. Exclusive Tools
5. Smart Mirroring
6. Certified Exchanges
7. Compound Interest

1. User Custody

The permission of the API that we use in connection with the Exchanges does not allow the transfer of user assets to other accounts, generating transparency and security

API restrictions

Enable Reading 

Enable Margin Loan, Repay & Transfer

Enable Symbol Whitelist [Edit](#)

Enable Spot & Margin Trading

Permits Universal Transfer

Enable Withdrawals

Enable European Options

IP access restrictions:

Unrestricted (Less Secure) 

Restrict access to trusted IPs only (Recommended)

A 3D line chart with glowing blue lines and a grid background. The chart shows a line that trends upwards and then downwards, with several data points labeled with numbers like 24,405 and 23,785. The background is dark with a grid pattern.

2. Direction Indicators

There are several customized tools that work together and with the purpose of identifying the ideal moments for the robot to make new entries in the market with the greatest possible assertiveness

3. Average Price

It is a structured operation that adds more lots to an already consolidated position and tends to be very positive

Our robot makes new purchases every time the market drops and reacts, or even at each new Bullish Indicator entry signal

EXAMPLE 2

Buy + 30K
 Make a new Average Price
16.6K

The tool makes a new purchase at every entry signal

Average Price Against in Cycles

4. Exclusive Tools

Exclusive Tools - 1

It is not interesting to buy assets when their prices are close to the resistance line

Therefore, we have developed a tool that allows our users to prevent the robot from making purchases in this higher risk area

PROTECTION IN THE RISK AREA

Resistance Line ↑

Risk Zone

Support Line ↓

7 Days Period

Do not buy at the highest odds of the week

Exclusive Tools - 2

All markets face better or worse moments and, thinking about it, we have developed a solution with which our users can take advantage of each market moment with a different profile strategy

OPERATION ON ADAPTIVE BANDS

Exclusive Tools - 3

This function absorbs all the potential for appreciation in times of highs and the robot only sells the asset when the market starts to fall, all configurable by the user. But Scalping can also be performed by disabling this tool

FLOATING PROFIT

The Asset is sold when the market starts to fall

5. Smart Mirroring

With the Adaptive Bands, we can explore the Up and Down markets of the Cryptocurrencies with the highest trading volume in the world, making entries only in the C Band of each asset
